IMPORTANT NOTES

<u>BEFORE</u> installing MII Version 1.1, it is very important that you read the ReadMe file provided with this setup.
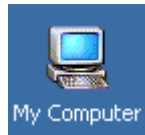

Remove any previous MII installation <u>before</u> installing MII Version 1.1. To uninstall, see the Removing MII section of this guide.

If MII Version 1.0 was <u>not</u> previously installed on your computer, MII Version 1.1 will install a new version of the Microsoft .NET Framework Version 1.1, which is required for MII to operate on your computer. If you had a pre-release version of MII or another application that uses the .NET Framework installed on your computer, you will also have Version 1.0 of the .NET Framework installed on your computer. If no other applications on your computer are using the .NET Framework Version 1.0 you may uninstall that version. To uninstall, use the Add/Remove Programs utility found in the Control Panel.   <u>Make sure no other applications are using this software before uninstalling.</u>

See the Copying Libraries section of this guide to install MII Libraries.
